

Lessons learned From testing solutions to transforming systems

Possibly, without TEVU, achieving these objectives would have taken six times longer.

TEVU demonstrated that a GEF Project can act as an accelerator:
test, learn and built lasting capacity to continue

What can TEVU bring to GEF-8 Sustainable cities

Do not replicate projects → transfer capacities

**BUILT WITH PEOPLE → DEMONSTRATE → INTEGRATE → SUSTAIN → INSTITUTIONALIZE
CAPACITY → CHANGE → SCALE**

TEVU taught us that a project's greatest legacy is not necessarily the infrastructure it leaves behind, but rather the capacity it builds. If we take this lesson into GEF-8, the opportunity is not to replicate TEVU in other cities, but to use what we have learned to help those cities move forward faster, with solutions adapted to their own capacities and realities.
