

## “Linear Parks – “Parques Lineares”

Friday, 20 September 2019, 09:00

São Paulo, Brazil

Linear parks or greenways are a sustainable method of urban development, through urban interventions built along a river. Usually larger in length than in width, such spaces are capable of connecting green areas, protecting and restoring the ecosystem, controlling floods, promoting leisure, sports, and cultural practices, being characterized as a sustainable initiative to occupy urban areas.

You can find more information about linear parks in Sao Paulo [here](#) and [here](#).
